Science

WALT: Understand what plants need to grow.

Penguin and Zebra Class
scientists,
Mrs Mitchell needs your
help with an investigation!

Last week one of your tasks was to grow a plant from a seed.

Mrs. Mitchell's family have started to grow some cress seeds and have made sure that they have everything they need to grow- sunlight, water, soil and air.

However, one rainy afternoon last week Mrs. Mitchell's children

wanted to help her use the watering can to water the cress. The problem is Oscar poured a fizzy drink into one pot of cress thinking it would make the cress taste nicer and Amelia

thought they looked dirty so poured washing up liquid in another!

Year 2 scientists we need your help! Which liquid will help the cress to survive?

Fill in the investigation sheet below to help record what has happened and make your prediction on what you think will happen next.

If you have some cress seeds at home, you could set up this experiment too!
